

15. Since one square on a hundred grid is equal to 1%, then one square on a thousand grid (10 hundred grids placed together) would be equal to 0.1%. If this pattern is continued, then very small percents can be expressed on larger grids. If a ten million grid was used, then 0.0000125% would be represented by 1.25 squares.

Hundred	1%
Thousand	0.1%
Ten thousand	0.01%
Hundred thousand	0.001%
Million	0.0001%

17. Answers may vary. Example: a) “Ticket sales are $\frac{13}{10}$ of what they were this time last year.” The number 1.3 sounds like a small number. b) “We are already at 0.605 of our target and we just started!” The decimal 0.605 is easily recognizable as more than half. c) “We have managed to cut our costs by $\frac{75}{10\,000}$.” The large denominator makes this number sound large.
